

About XBRL

XBRL is a machine-to-machine standard for data exchange. Find out more here:

<https://www.XBRL.org/the-standard/what/an-introduction-to-XBRL/>

Technical Requirements

XBRL requires dedicated processing and the files are not intended to be human readable.

Filers need to become familiar with the XBRL standard and ensure they have systems in place for the generation of valid instance files in response to the published taxonomy.

The link below provides some initial guidance:

<https://www.XBRL.org/the-standard/how/getting-started-for-business/>

Vendors

A non-exhaustive list of European XBRL solution vendors is available via the following link from the Eurofiling group:

<https://eurofiling.info/portal/XBRL-solutions/>

It is the responsibility of firms to make necessary technical arrangements to submit files required to meet reporting obligations of the Central Bank of Ireland as laid out in the published taxonomy.

CBI Help on filing

The Central Bank of Ireland can provide limited help on some basic filing advice on encountering an issue, but makes no commitment to resolving specific vendor problems.

Email omni@centralbank.ie for support.
